

Teaching Change

Change can be very scary. It's leaving your comfort zone for a whole new experience. You can never expect what happens during change. Sometimes, unexpected challenges arise that force you to adapt quickly. The uncertainty may feel overwhelming, but it also presents opportunities for growth and learning. As mentors, we must help our mentees understand that old routines may seem comforting, but breaking free from them allows you to discover strengths you never realized you had. Each new situation demands creativity and resilience, pushing you beyond your limitations.

This growth process can often feel uncomfortable, yet it is within this discomfort that real progress occurs. By encouraging mentees to embrace uncertainty, we help them develop the flexibility necessary for continual improvement. Sometimes, mentees may doubt their capacity to adapt or succeed. Sharing examples of others who have thrived after taking similar risks can provide reassurance and motivation. Recognizing small achievements along the way reinforces their belief in themselves.

Equipping mentees with problem-solving strategies further empowers them. When challenges arise, they will be more likely to approach obstacles confidently and see setbacks as learning opportunities rather than reasons to retreat. Over time, the fear begins to fade as we gain confidence facing new experiences. With every small success, adapting to change becomes a little easier, turning fear into excitement for what lies ahead.

Question for you: How do you teach your mentees to embrace change?
